

How can Palsgaard help you **lower the footprint of your chocolate?**

The **over farming of cocoa** is a major cause of deforestation. Reducing the cocoa butter content of chocolate lessens the demand for this scarce resource.

With emulsifiers twice as effective as lecithin in substituting the rheology effect of cocoa butter, **you can reduce cocoa butter usage by up to 3%** without compromising taste, quality or appearance.

For every
10,000 MT of chocolate

you can save up to

300 tons of cocoa butter

=

which equates to

740 hectares of land

which is about
1,000
football pitches
